

Product Manager who ships agentic AI into security-critical government and enterprise systems. I own the roadmap for SPEED, Taiwan's market-leading official document system serving 400+ organizations, and have shipped an on-premise LLM agent with human-in-the-loop review and ML routing at 85–95% production accuracy. Seven years of full-stack engineering before product let me weigh model quality, hardware limits, and ISO 27001/27701 compliance directly with engineering teams. I still build, planning and prototyping with Claude Code, Codex, OpenCode, and Pi.

EXPERIENCE

Galaxy Software Services Corp.

Jun 2016 — Present

Product Manager

Jul 2024 — Present

- Own the roadmap for SPEED, Taiwan's market-leading official document system serving 400+ government and enterprise organizations, deciding what ships and trading platform features against client-specific projects; annual product revenue more than doubled from 2022 to 2025.
- Shipped an AI agent to production that drafts official letters and retrieves documents through RAG search on OpenSearch, running on on-premise LLMs including Gemma 4 with human-in-the-loop review; live at 4 clients, more in POC.
- Designed the agent around reusable skills (instructions plus scripts and tools), and led a 9-person internal team that rolled out skill building and use on Open WebUI and OpenWork across a ~100-person business unit, developers and non-developers alike.
- Shipped ML document routing at 85–95% production accuracy across client deployments, and launched an embeddable agent product (chat widget plus admin console) for systems outside SPEED, now live at its first customer.
- Lead a 10+ person cross-functional team; now building an MCP server so the agent can plan and run multi-step workflows such as dispatching documents and tracing where one is stuck.

Product Development Manager

Nov 2023 — Jul 2024

- Turned AI research prototypes into shippable features, aligning AI Research, Engineering, and Presales to embed LLM/NLP document generation in SPEED.
- Directed VITAL-OD, the secure Azure SaaS edition with a free-trial-to-subscription model, opening NGOs, NPOs, and small agencies as a new segment with ~50 new subscribing organizations per year.

Software Designer & System Analyst

May 2021 — Nov 2023

- Built the platform's first semantic search with OpenSearch and vector embeddings, and designed modular services using Domain-Driven Design.
- Built DevSecOps pipelines (SAST/DAST/SCA) and delivered TW FidO digital signatures and document encryption for compliance.

Software Engineer (Junior → Senior)

Jun 2016 — May 2021

- Built the browser-based WYSIWYG editor for regulation-compliant official documents, now the core editing experience for 400+ organizations and also sold standalone.
- Shipped SPEED's first ML feature, a recommendation model, in 2019; full-stack delivery across .NET, SQL Server, TypeScript, and Kendo UI.

SKILLS

Product Strategy

AI Agent Design

LLM / RAG

On-prem LLM

MCP

Agent Skills

Human-in-the-Loop

PRD / Spec Writing

Agile / Scrum

System Design

DevSecOps
